### Square Shank Center Drill Holder

The CANELA Center Drill Holder is a square shank tool holder that will allow you to get into the narrow space between the end of the part and the tailstock of your CNC lathe.

#### The Center Drill Holder's additional benefits:

- 1 - Is not limited to combined center/spotting drills alone, counter sinks, drills, and boring bars may be used.
- 2 - Frees up drill chucks and collet holders on your tool turret.
- 3 - Allows you to utilize unused turning tool pockets on your turret.
- 4 - Increases tooling arrangement flexibility.
- 5 - Can be used on manual and CNC lathes.
